## **DETAILED ACTION**

### ***Response to Arguments***

The Applicant's arguments files on July 9, 2007 have been fully considered.

As per the pending claims the Examiner agrees that limitations of claims 1,4-9 and 12-18 are not disclosed in any prior art references.

### ***Allowable Subject Matter***

Claims 1,4-9 and 12-18 are allowed over the prior art record.

The following is an examiner's statement of reasons for allowance:

The closest prior art of record Drake (US Patent 6,006,328) teaches a software based computer security system.

None of the art of record, taken individually or combination disclose at least the steps/components of: making a search to see, when the user has ordered execution of the command in one of the plurality of application files, to seek a reference to the access condition corresponding to the command in the memory table, launching the ordered execution of the command when the access condition is referenced, and asking the user to satisfy the access condition when said condition is not referenced, and upon satisfying the access condition, referencing the access condition and launching the execution of the ordered execution of the command.

Even if the features missing from the above cited prior art were found in a reasonable

number of references a person of ordinary skill in the art at the time of the invention would not have been motivated to combine these reference because the claimed feature of "satisfy the access condition when said condition is not referenced" is not typically a feature of microcard chips and would have to be located in prior art unrelated to microcard chips.

Claims 1,9,17 and 18 are allowable for the above cited reasons.

Claims 4-8, and 12-16 are dependant upon claims 1 and 9 respectively and are therefore allowable for at least the same reasons.
